Grand Avenue

This project is an expansion and remodel of the existing church and school structures, which are located approximately 6 miles apart.

The church, originally designed for a congregation of 300, was constructed in 1952. Additions included programs for additional Sunday School classrooms, bible study areas, and expanded narthex. The church nave was also renovated to brighten and modernize the altar area.

The original church design posed numerous accessibility problems, which were overcome with this project.
